Company Profile

SINCE 2000

--- Tire manufacturing enterprise integrating tire development, production and sales, and international trade

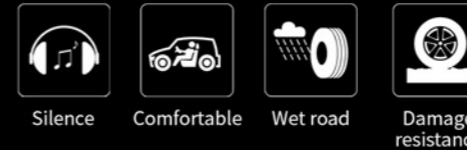

Fangxing Rubber Co., Ltd. was established in 1998. It is located in one of the top 100 counties of China and the hometown of famous ancient strategist Sun Wu – Guangrao County in Dongying, Shandong. The company has a floor area of 600,000 square meters, more than 2,000 employees including over 200 engineering and technological personnel, and total assets of 3 billion yuan. It is a tire manufacturer integrating R&D, production, sale, and international trade.

At present, the company has achieved the annual production capacity of 1.2million sets of PCR 3.5 million of TBR sets of all-steel TBR tires and 150,000 sets of OTR tires. The company has passed the ISO9001 Quality Management System certification, the state's compulsory product certification and other related system certifications. The company has set up over 100 sales points across China, having created a sales network covering more than 30 provinces, municipalities and autonomous regions nationwide. While meeting the domestic demands, the products are also exported to more than 50 countries and regions, such as, Europe, Africa, Australia, the Middle East and Latin America.

In the process of development, the company has created a first-class production team, to product first-class tire products with first-class equipment and first-class raw materials, allowing users to feel carefree after using our products, so that both the

UPALA G-20

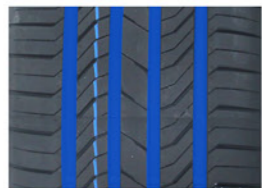

High performance tire series

With the tire structures optimized by computer simulation programs, the specially designed profiled ensure the outstanding performance.

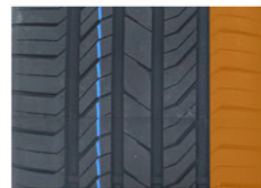

The special eco-friendly formula of wear resistance promises the higher mileage and better gasoline efficiency to achieve the purposes of environment protection.

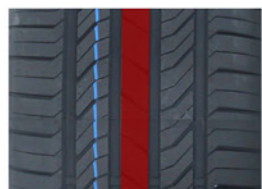

Features

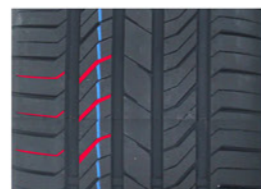

The excellent water evacuation performance provided by the 4 longitudinal grooves ensures the driving safety at high speed on wet road surface.

The distribution of pattern block is identified through computer simulation, which effectively lower noise when driving.

Wide center rib and consutive side pater blocks guarantee the straight driving stability at high speed.

The excellent water evacuation performance provided by the 4 longitudinal grooves ensures the driving safety at high speed on wet road surface.

Non-directional symmetrical pattern design, easier for installation.

RUBY G-31

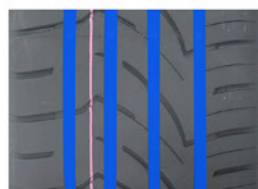

High performance tire series

With the tire structures optimized by computer simulation programs, the specially designed profiled ensure the outstanding performance.

Unique anti-wet skid pattern formula not only characterizes the amazing performance both in wet grip and wet braking, but also reduces the rolling resistance for better safety and environment protection.

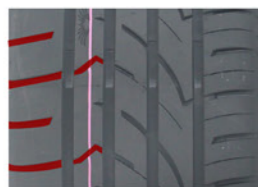

Features

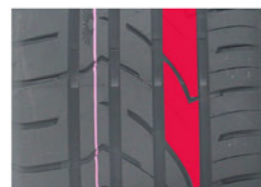

4 wide longitudinal grooves for water evacuation effectively avoid lateral skid of tire.

Outer consecutive side pattern blocks provide superior handling performance.

The safety performance is greatly improved by the multi-groove design at tire internal side.

Outer consecutive side pattern blocks provide superior handling performance.

The logo of eagle wings makes the appearance more sports and sharp.

LAIRD G-35

High performance tire series

The designed durable tread formula provides long mileage.

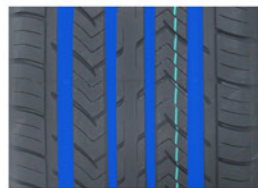

The improved design for the classic herringbone groove is for high control performance in wet road.

Features

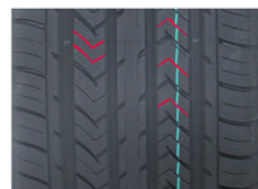

4 wide grooves swiftly drain off water. Ensure the safety when driving in wet road.

Edge cutting Angle design, avoid irregular tread wear.

Middle longitudinal continuum provide stable straight handling.

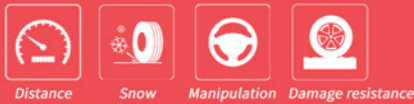

Middle longitudinal continuum provide stable straight handling.

HIMALAYA G-39

High performance tire series

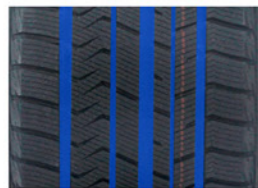

The Multi-pitch pattern block designs by computer simulation analysis of reasonable arrangement, effectively reduce the tire noise.

Features

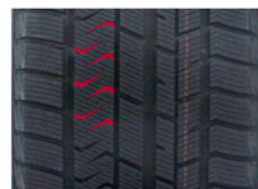

Five vertical grooves drain water quickly and effectively to ensure safety driving on the wet road.

The Large block pattern designs improve tire handling performance.

Dense 3D pattern design for excellent gripping and control performance against snow.

The crossed trench designs provide stable gripping in the snow road.
